2013 TIGLFF App

Designed, Developed and Marketed by Christian Reich

App Screenshots

Launch Screen

This screen is shown each time the app is launched and features an animated background. The film reel in the orange also rotates as the app loads. After loading this screen fades to the film screen.

Films

This is the first screen you see after the launch screen.

Filter options by category, title and venue. Further filter by date using the scrub bars. Tap on a film for more information. Film title boxes silde in and out as the film reaches the center of the screen.

Single Film

The single film screen shows all of the information about the film including a description and its screening information. You can view a trailer, if available, share the film to social media, add it to their favorites, and purchase tickets.

Tickets

View and purchase tickets and passes using the PayPal API.

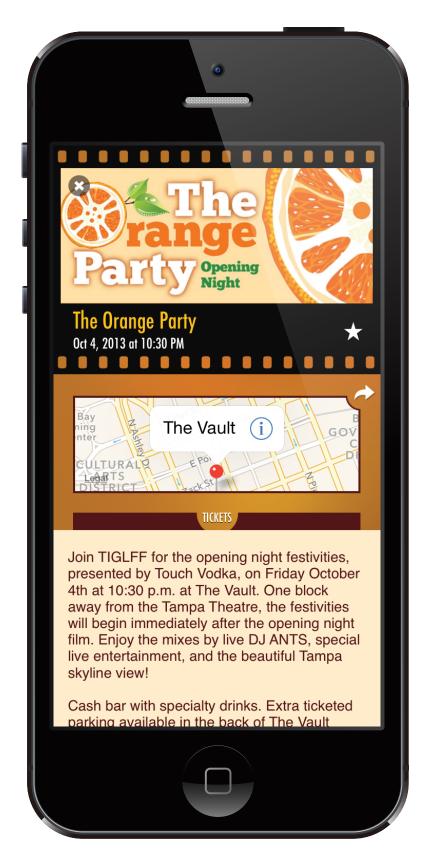

Scan Tickets

Store tickets in the app and use your device as your ticket with a QR Code to scan.

Events

Filter by date using the scrub bars. Favorite using the stars on the right.

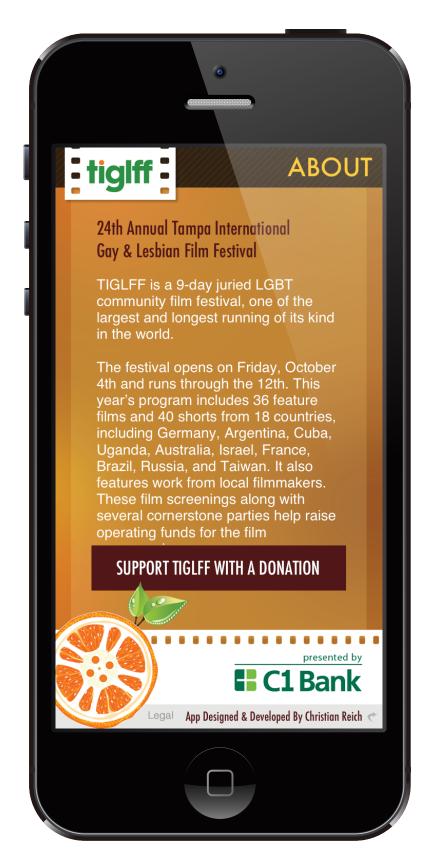

Single Event

The single event screen shows all of the information about an event. You can view a map of the event's location, get directions, order tickets, favorite the event, and share to social media.

My FavesView your favorited films and events. A calendar view provides an easy way to view your schedule. There is also a shortcut to view my tickets.

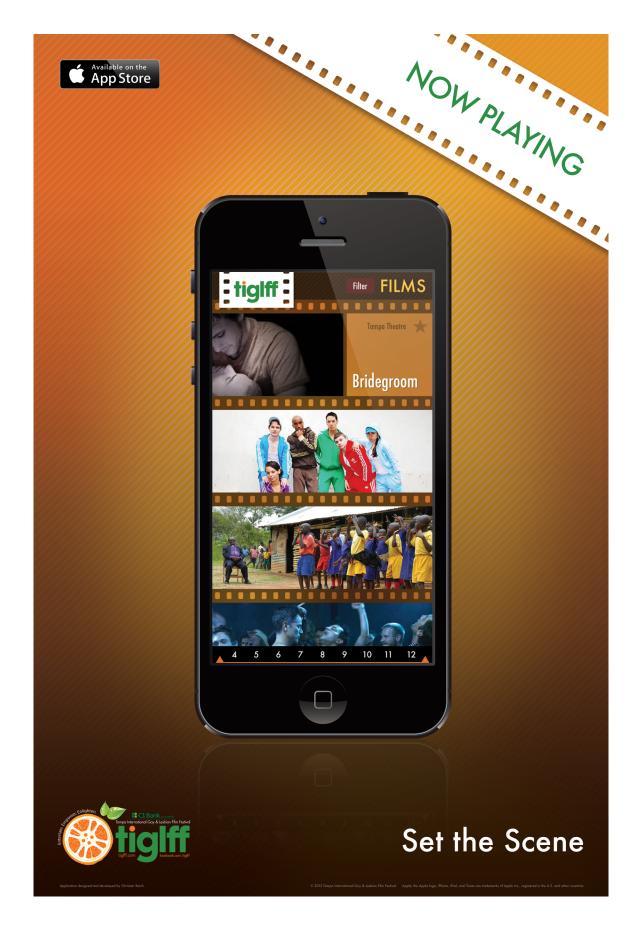

About

This screen provides information about TIGLFF and an opportunity to donate via the web.
