

## CINEMAGRAPHS - STUDENT WORK, UNIVERSITY OF TAMPA 2014

In a digital imaging course I took my senior year I took an interest in cinemagraphs. For those who don't know a cinemagraph is an animated gif that usually focuses just one moving facet of the image, giving it more aesthetic value than your typical repetitive gif. The challenging part about creating a visually stunning cinemagraph falls within color balance. The reason for this is that .gif files can only contain up to 256 colors, so choosing a color palette for your scene is extremely important.

Cinemagraph

Wait for it.....
